Who this course is for

You've read some essays, watched the talks, and you don't think the people building AGI have a serious plan for making it go well. You want to change that.

The course is an in-depth introduction to what's going on with AI development, what the good and bad outcomes could be, and what could be done to steer AI towards better futures.

It's built for three groups: 1) domain experts in policy, security, operations, or engineering looking to redirect their skills; 2) people heading into technical safety or governance roles who want the strategic picture first; and 3) newcomers who are serious about making big moves and having a huge impact.

Not sure you fit? Apply anyway. Recent cohorts have also included teachers, lawyers, engineers, and community organisers.

How this course will benefit you

A launchpad for your AI safety career

You'll leave this course with an opinion on which threats matter, early takes on how we could solve these problems, and concrete next steps you can take.

A clear way to think about the future of AI

You'll analyse the incentives facing AI companies. You'll develop "kill chains" to analyse the threats. And you'll apply defense in depth to evaluate and prioritise interventions. You'll know enough to hold your own in rooms with experts.

A community of builders

BlueDot has 7,000+ alumni, with many now working at Anthropic, DeepMind, UK AISI, and dozens of organisations working on a safe transition to advanced AI. You'll meet people in the field who can open doors for you and pressure-test your thinking.

What happens after

This course is where you get oriented. What comes next depends on you.

Technical AI Safety
Interpretability, evals, alignment research. For people ready to work on the technical problems.
Explore the course

AI Governance
Policy, institutions, international coordination. For people shaping how these systems get governed.
Explore the course

Biosecurity
Pandemic preparedness, early warning systems, policy. For people building defences against bio risks.
Explore the course

Rapid Grants
Small, fast funding for concrete AI safety work. Five-minute application, decisions in days, money upfront by default.
Explore program

Career Transition Grants
Funding to enable you to work full-time on impactful AI safety work. Propose your plan and we'll back you.

How the course works

Options	Intensive (~5 days at ~5h/day) or part-time (~5 weeks at ~5h/week). Same content, different pace.
Commitment	Each day or week, you will: **Complete 3 hours** of reading and writing, and **join ~8 peers in a 2-hour Zoom meeting** to discuss the content.
Facilitator	All discussions will be facilitated by an AI safety expert.
Price	This course is freely available and operates on a "pay-what-you-want" model.

Schedule

INTENSIVE: 5 day course (5h/day)

10 Aug – 14 Aug
Applications close 3 Aug at 23:59 UTC
Apply now

24 Aug – 28 Aug
Applications close 17 Aug at 23:59 UTC
Apply now

7 Sep – 11 Sep
Applications close 31 Aug at 23:59 UTC
Apply now

PART-TIME: 5 week course (5h/week)

3 Aug – 6 Sep
Applications close 27 Jul at 23:59 UTC
Apply now

7 Sep – 11 Oct
Applications close 31 Aug at 23:59 UTC
Apply now

12 Oct – 15 Nov
Applications close 5 Oct at 23:59 UTC
Apply now
